Dear Sir/Madam,

Recent articles in the Advertiser state that the government is considering spending huge amounts of money to build an overpass over the South road and several other infrastructure projects of questionable value to the community. On the other hand, this project 'The freight rail bypass' has significant efficiencies and huge benefits which are obvious and can not be ignored. The people affected by this issue, number not in thousands but tens of thousands. In reading the discussion paper it is quite evident that option 3 (the northern bypass south of Truro) is the best and preferred option. The community has been asking for this project to go ahead for years and at present the federal government is focused on nation building and therefore the time is right to move this project forward with all haste for this is real nation building.

Yours truly,

John C Terrell
