**PROBLEM DESCRIPTION**

The Kings Highway corridor beginning east from Canberra International Airport and continuing into NSW is the main access corridor between Canberra and the south coast of NSW. It is predominantly a mix of dual and single carriageway causing considerable congestion, especially during holiday periods making it very unreliable and dangerous with a number of deaths and serious accidents.

This project will deliver targeted upgrades along the corridor to improve the east-west connectivity between NSW and the ACT, including freight movements. The project will also reduce travel times, increase travel time reliability, and improve safety.

The Australian Government will work with the ACT and NSW Governments to identify priority projects. Funding will be provided on an 80:20 split.

**PROJECT BENEFITS**

- Improve road safety.
- Improve travel times and reliability.
- Improve efficiency and reliability.
- Improve freight efficiency, connectivity, and travel time.
