Calculation of estimated number of full-time equivalent (FTE) jobs

A full-time employee is defined as working 75 hours per fortnight.

In calculating the estimated number of FTE jobs during the construction period, Eligible Funding Recipients will need to convert part-time employees to full-time equivalent.

For example:

Five workers will be working on a project.

Three of these workers will be employed full-time, working 75 hours per fortnight.

Two workers will be employed part-time, working 20 hours per fortnight.

To determined FTE of part-time workers: $2 \times (20/75) = 0.53$ FTE

So total FTE = 3 (full time workers) + 0.53 FTE
= 3.53
